

AMENDMENTS TO SPECIFICATION

Page 8, lines 1-11:

Referring to FIGS. 3~5 again, if the swivel arm 31 is directly pivoted to the cover shell 2, the fabrication procedure will be complicated and, the repair work of the swivel arm will be difficult. Therefore, a pivot holder 3 is fixedly provided at the cover shell 2 for receiving the swivel arm 31, and a pivot pin 313 is installed to pivotally secure the swivel arm 31 to the pivot holder 3. The stop member 32 ~~is protruded~~ protrudes from the inner wall of the cover shell 2 and is spaced from the swivel arm 31 at a distance. The pivot holder 3 has a recessed receiving chamber 33 adapted to receive the finger strip 311 when the swivel arm 31 is turned to a horizontal position in flush with the outer wall of the cover shell 2. Further, the finger strip 311 has a finger hole 314 (see FIG. 3). The user can insert one finger into the finger hole 314 to move the finger strip 311.
